No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1993 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

This journal is printed on acid-free paper.

Contents of Volume 102

Number 1, March 1993

1 **Venusian Channels and Valleys: Distribution and Volcanological Implications**
Goro Komatsu, Victor R. Baker, Virginia C. Gulick, and Timothy J. Parker

26 **Recent Volcanic Activity on Venus: Evidence from Radiothermal Emissivity Measurements**
Cordula A. Robinson and John A. Wood

40 **A Numerical Model of a Coupled Magmatism–Mantle Convection System in Venus and the Earth's Mantle beneath Archean Continental Crusts**
Masaki Ogawa

62 **A Polarimetric Search for Ice Crystals in the Upper Atmosphere of Venus**
G. P. Können, A. A. Schoenmaker, and J. Tinbergen

76 **Vertical Structure of the Martian Dust Measured by the Solar Infrared Occultations from the Phobos Spacecraft**
O. I. Korablev, V. A. Krasnopolsky, A. V. Rodin, and E. Chassefière

88 **Coupled Atmosphere–Ocean Models of Titan's Past**
Christopher P. McKay, James B. Pollack, Jonathan I. Lunine, and Régis Courtin

99 **Spatial and Spectral Characteristics of the Near-Infrared Aurorae of Jupiter**
Sang J. Kim, David A. Glenar, Richard R. Joyce, and Theodor Kostiuk

107 **Modeling of S-Type Asteroid Spectra Using Primitive Achondrites and Iron Meteorites**
Takahiro Hiroi, Jeffrey F. Bell, Hiroshi Takeda, and Carlé M. Pieters

117 **Doppler Measurements of the H_2O^+ Ion Velocity in the Plasma Tail of Comet Levy 1990c**
H. Rauer and K. Jockers

134 **Comparative Mapping of Pluto's Sub-Charon Hemisphere: Three Least Squares Models Based on Mutual Event Lightcurves**
Eliot F. Young and Richard P. Binzel

150 **Numerical Calculations of the Linear Response of a Gaseous Disk to a Protoplanet**
D. G. Korycansky and J. B. Pollack

Notes

166 **Near-Infrared Photometry and Spectroscopy of the Unusual Minor Planet 5145 Pholus (1992AD)**
John K. Davies, Mark V. Sykes, and Dale P. Cruikshank

170 **Properties and Tentative Identification of the Strongly UV-Absorbing Surface Constituent on Triton**
S. Alan Stern

Number 2, April 1993

175 **Tectonic Patterns and Regional Stresses near Venusian Coronae**
K. E. Cyr and H. J. Melosh

185 **The Continuum Slope of Mars: Bidirectional Reflectance Investigations and Applications to Olympus Mons**
Erich M. Fischer and Carle M. Pieters

203 **Lunar Regolith Analogues: Spectral Reflectance Properties of Compositional Variations**
Edward A. Cloutis and Michael J. Gaffey

225 Ferric Iron in Primitive Asteroids: A 0.43-μm Absorption Feature
Faith Vilas, Erin C. Hatch, Stephen M. Larson, Scott R. Sawyer, and Michael J. Gaffey

232 The Hydrogen and Helium Pressure Broadening at Planetary Temperatures of the 183 and 380 GHz Transitions of Water Vapor
J. M. Dutta, C. R. Jones, Thomas M. Goyette, and Frank C. De Lucia

240 Modeling Titan's Thermal Infrared Spectrum for High-Resolution Space Observations
A. Coustenis, Th. Encrenaz, B. Bézard, B. Bjoraker, G. Graner, M. Dang-Nhu, and E. Arié

261 Numerical Simulations of the Formation and Evolution of Water Ice Clouds in the Martian Atmosphere
Diane V. Michelangeli, Owen B. Toon, Robert M. Haberle, and James B. Pollack

286 The Mars Water Cycle at Other Epochs: Recent History of the Polar Caps and Layered Terrain
Bruce M. Jakosky, Bradley G. Henderson, and Michael T. Mellon

298 A Photographic Search for Satellites of Uranus
Anna N. Żytkow, Mike Irwin, Rachel Webster, and Scott Tremaine

307 Image Deconvolution of Extended Objects: A Comparison of the Inverse Fourier and the Lucy Techniques
Cindy C. Cunningham and David Anthony

316 Secular Resonances in Mean Motion Commensurabilities: The 2/1 and 3/2 Cases
Alessandro Morbidelli and Michele Moons

Book Review

333 *Satellites of the Outer Planets: Worlds in Their Own Right*. By David A. Rothery
Paul M. Schenk

334 *Author Index for Volume 102*

NOTICE

The Subject Index for Volume 102 will appear in the December 1993 issue as part of a cumulative index for the year 1993.

INFORMATION FOR AUTHORS

ICARUS is devoted to the publication of original contributions in the field of solar system studies. Manuscripts reporting the results of new research—observational, experimental, or theoretical—concerning the astronomy, geology, meteorology, physics, chemistry, biology, and other scientific aspects of our solar system or extrasolar systems are welcome. The journal generally does not publish papers devoted **exclusively** to the Sun, the Earth, celestial mechanics, meteoritics, or astrophysics. Reviews, historical papers, and manuscripts describing spacecraft instrumentation may be considered, but only with prior approval of the Editor. An entire issue of the journal is occasionally devoted to a single subject, usually arising from a conference on the same topic. ICARUS does not publish meeting announcements or general notices. The language of publication is English. In special cases, with the Editor's approval, short abstracts of papers can also appear in French, German, or Russian.

All papers are reviewed, generally by two independent referees. Authors will usually be asked to respond to criticisms and suggestions by the referees prior to publication; at the Editor's discretion, reviewers may be consulted about resubmitted manuscripts. Authors are invited to give recommendations pro or con about potential reviewers; the Editor may use these to guide the selection of referees. If authors so request in their cover letters, manuscripts will be handled anonymously during the refereeing process.

Manuscripts are accepted for review with the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out. Furthermore, any person cited as the source of a personal communication should have approved such citation; in particular, written documentation must be sent when the manuscript is submitted if the personal communication is crucial to the arguments of the submitted paper, or critical of another's work, or controversial. For the benefit of the reviewers, three (3) copies of all significant references cited in the manuscript as *submitted* or *in press* must accompany the paper.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal. Articles and any other material published in ICARUS represent the opinions of the authors and should not be construed to reflect the opinions of the Editor or the Publisher.

There are no page charges. However, authors will be charged for color reproduction or foldout pages; the publisher will provide an estimate of these costs on request. Fifty **reprints** of each paper will be furnished gratis to the author and additional reprints may be purchased.

Manuscripts. *Four copies* of the manuscript, including figures, tables, etc., should be submitted to:

Editorial Office, **Icarus**
Space Sciences Building
Cornell University
Ithaca, New York 14853-6801

Telephone: 607-255-4875
Fax: 607-255-6354
Telex: WUI 6713054
Electronic mail:
CUSPIF::ICARUS (on span)
icarus@astrosun.tn.cornell.edu (on internet)

Authors should retain the original typescript. At least one set of figures should be suitable for camera-ready reproduction. All manuscripts must be typewritten with wide margins and *double-spaced throughout,* including references and footnotes. Number each page of the manuscript. Include on the first page the title of the paper and the name(s) and affiliation(s) of the author(s), including mailing address(es), telephone number(s), fax number(s) [or telex number(s) if fax is not available], and electronic mail address(es). At the bottom of the first page note the number of manuscript pages, figures, and tables; also list up to five key words (topics), taken from the journal's index, that classify the subject of the paper. On the second page indicate a proposed running head of not more than 60 characters, and the name and address to which editorial correspondence and proofs should be directed. The third page should contain a brief abstract, and the text should begin on the following page. After the main text, give Appendixes, Acknowledgments, references, tables, figure captions, and figures, in that order. Places where figures and tables are to appear in the published paper should be marked in the margins of the manuscript. For the review process authors may submit manuscripts in which figures and tables appear in the manuscript proper.

Please write with attention to organization, style, and especially brevity. Present results logically, with order dictated by the needs of the reader. Take special care in composing the title and abstract, since these will be the most frequently read sections of the paper. In the title, specific words are preferable to general ones. The abstract should summarize the conclusions of the research, including quantitative results where appropriate, rather than merely stating the problem.

Whenever possible, quotients in mathematical expressions should employ the solidus (/) rather than being displayed in built-up form. However, for units, exponential notation is preferred (e.g., erg cm^{-2} sec^{-1}, not erg/cm^2 sec).

Tables and Figures. When described in the body of the text, a table should be referred to as Table X, an equation as Eq. Y, and a figure as Fig. Z (use these abbreviations everywhere except at the beginning of a sentence).

Tables are to be numbered consecutively with Roman numerals in order of their citation in the text. Each table should be typed, *double-spaced,* on a separate sheet with due regard to the proportions of the printed page. All tables should bear appropriate headings. Unusually elaborate tables should be prepared to allow them to be reproduced in the journal directly without typesetting.

Figures. At the time of submission of the manuscript, one original of each figure is to be submitted in such form as to permit photographic reproduction without redrawing: Line glossies should be carefully drafted, no larger than 22 × 30 cm. Original drawings, laser prints, or standard glossy photographic reproductions are acceptable. *Authors should design figures so that they will fit one or two columns of print. Care should be taken to assure that computer-drawn figures use the journal's*

space efficiently. Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough to still be legible after reduction. Drawings should be made with black India ink on tracing linen, smooth-surface white paper, or Bristol board. Alternatively, *high-quality* computer graphics may be acceptable. Graph paper, if used, should be ruled in blue. *Each figure should be identified with the author's name and figure number.* All figures, whether line drawings or halftones, should be numbered consecutively in Arabic numerals, in order of their citation in the text. Figure captions should be typewritten on a separate sheet, following the text. Color plates and foldouts are published at the author's expense.

Literature Citations. *Careful compliance with the instructions for the preparation of the list of references is required;* manuscripts with incomplete references (or missing abstracts) may be returned to the author for correction before being considered for publication.

Literature citations in the text should be in one of the following forms: Sridhar and Tremaine 1992 (for two authors); Farinella *et al.* 1990 (for three or more authors); Allison 1990, p. 198 (for reference to a specific page). To distinguish two or more works by the same author(s) in the same year, use suffixes a, b, etc., following the year (e.g., Cruikshank *et al.* 1991a, 1991b).

Literature citations in the bibliography should be *listed alphabetically* according to the surname of the (first) author. Journal references should contain the *names and initials of all authors, the year, the title of the article, and standard abbreviation of the journal, the volume number, and the first and last page numbers*. Titles of journals and books should be in italics, volume numbers in boldface. (In a typed manuscript, indicate italics by single underlining and boldface by wavy underlining.) Below are shown examples of the proper reference forms for a book, a journal article, and a book chapter, respectively.

LINDZEN, R. S. 1990. *Dynamics in Atmospheric Physics*, Cambridge U. Press, Cambridge.

SPENCER, J. R. 1990. A rough-surface thermophysical model for airless planets. *Icarus* **83,** 27–38.

VEVERKA, J., R. H. BROWN, AND J. F. BELL 1991. Uranus satellites: Surface properties. In *Uranus* (J. T. Bergstralh, E. D. Miner, and M. S. Matthews, Eds.), pp. 528–560. Univ. of Arizona Press, Tucson.

Guidelines for Electronic Submission of Manuscripts. This procedure pertains to the submission and review process only. Authors who wish to submit a disk with their accepted manuscript should read the section on Personal Computer Disks below in this Information for Authors.

(i) For electronic transmission, manuscripts *must* be prepared in either plain TeX or LaTeX or as a PostScript file.

(ii) Line art graphics and halftone images may be submitted as long as they are embedded within a PostScript file. Halftone images should be less than 800 × 600 pixels for the purpose of review.

(iii) Before transmitting the files, print out your own copy to ensure that all formatting is appropriate. The Editorial Office will not be responsible for correcting format errors. If we cannot print a file, the file will be returned to the author for correction and/or the author will be asked to submit hard copy of the manuscript by conventional means.

(iv) Authors must keep the number of files necessary to transmit a complete manuscript to the absolute minimum. In the header, be sure to identify the files that will be transmitted; the number of pages, figures, etc.; and the type of files (TeX, LaTeX, or PostScript). An advance mail message that a manuscript is being transmitted will be appreciated.

(v) Electronic manuscripts should be sent to: icarus@astrosun.tn.cornell.edu (on internet); NSI/DECnet users may send their files to: east::"icarus@astrosun.tn.cornell.edu."

(vi) Manuscripts that contain black and white photographs or color art must be submitted through the postal system.

Guidelines for Submission of "Notes." Papers on especially topical subjects will be given unusually rapid handling if they satisfy the following limitations on length:

(i) Manuscripts should be typed double-spaced and should be no longer than nine (9) pages, including a very brief abstract of one or two sentences.

(ii) The sum of figures and tables should be less than, or equal to, two.

We expect that ICARUS will publish "Notes" within four (4) months of submission, if no revision is required. We will try to complete refereeing and editorial handling in less than one month. In order to speed publication, proofs of "Notes" will be proofread only at Academic Press.

Proofs will be sent to the corresponding author. When submitting a manuscript, the author should include a list of the symbols employed, identified typographically, not mathematically. This list will **not** be printed, but will help to avoid costly author's corrections in proof. Authors will be charged for excessive alterations in proof.

Personal Computer Disks. Manuscripts may be submitted to ICARUS on personal computer disks after the manuscript has been accepted and after all revisions have been incorporated onto the disk. Please supply the file as a straight ASCII file with generic codes specified by the publisher. Label the disk with the type of computer used, the type of software and the version number, and the disk format. All tabular and mathematical material will be typeset conventionally. Art must be prepared as camera-ready copy; see the section on Figures earlier in this Information for Authors.

A hard copy printout of the manuscript that exactly matches the disk file must be supplied. Academic Press will not accept disks without accompanying printouts of all files on the disk. File names must clearly indicate the content of each file. The manuscript will be edited according to the style of the journal, and the proofs must be read carefully by the author. Disks that are not translatable or economical to process will not be used. The publisher reserves the right not to use the disk.

For further information on preparing the disk for typesetting conversion and a list of generic codes, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, 1250 Sixth Avenue, San Diego, California 92101; telephone: 619 699-6415; fax: 619 699-6800).
